

Superior Paint Preparation

- Heil bodies are pre-treated with our exclusive Henkel process before painting, to minimize scratch "creep" and provide an extra barrier against rust and corrosion
- Sikkens paint is specially formulated to give long lasting finish and durability in demanding environments.
- Top coat is baked on in our state-of-the-art paint facility.

Continuous Dumping Into 3-Yard Hopper

- Patented paddle packer design continuously sweeps the 3-cubic yard hopper, boosting productivity because the operator does not have to pause to activate the packer. Instead, the operator continues to collect his route while the paddle packer cleans the hopper.

Optional Hopper Cover

- Keeps trash from blowing out while driving to the disposal site or on long route runs.

Centrally Located Hydraulics

- Hydraulic components are easy to service, which reduces maintenance costs.

Left Hand or Right Hand Drive

- The Rapid Rail offers outstanding visibility for operators, which means operators can drive from the left hand side.
- You'll save money from the start, because you won't be spending it on costly right hand drive options.

Variety of Body Sizes

- Rapid Rail comes in 8 different body sizes, from 16 to 32 cubic yards.
- Single axle or tandem axle configurations give you the most flexibility of any automated system.
- All models are dump unload.

Mechanical Tailgate Locks

- Simple and effective tailgate locks safely secure the load.

Easy to Reach Cylinders

- All hydraulic cylinders on the Rapid Rail® are accessible from the ground, outside the body, for easy service.

Grabber Options

- Available with universal grabbers, belt grabbers, Tri-Cuff grabbers, or spring steel grabbers.
- Grabber storage bracket is included when any two sets of steel grabbers are ordered.
- Steel grabbers are easily changed on the route when alternate size is needed.

High Tensile Steel Construction

- Like all Heil bodies, Rapid Rail uses high tensile steel throughout, for superior strength without unnecessary weight.
- Body floor is 150,000 psi for long life.

Efficient Rapid Rail® Lift

- With over 20 years of experience, the Rapid Rail® lift is a proven, efficient and reliable automated lift.
- 96-inch reach goes where other automated arms can't.
- Rapid Rail® Lift Mechanism Dumps Using Straight Up, Vertical Motion, Without "Kicking Out" First, so you can get in and out of tight places easily.
- 1,600 lb. lift capacity and 8-second cycle time is fast and efficient, can collect up to 1,400 homes per day.
- Improved lift features long lasting Cordaflex harness, Deutsch connectors, rotary acuated switches, and structural enhancements.

Operate In Gear At Idle

- Tandem vane pump allows operation of lift and dump cycle to be performed at engine idle speed.
- Fuel savings up to a gallon per hour, depending on route.
- Finish routes up to 20% faster.
- Quieter operation is appreciated by customers and operators alike.
- Reduces wear and tear on lift mechanism as well as truck engine and transmission.

Electric Controls

- Electric over hydraulic controls can be more reliable in extreme cold or heat.
- Operators can choose from standard rocker switches or optional joystick controls.

Rapid Rail®

Automated Side Loader

- 8 Second Cycle Time
- Continuous Pack, Self-Cleaning Hopper
- Fast and Lightweight
- Proven and Reliable, Over 4,000 produced.
